

What types of cases can Invisalign® help with?

Invisalign can be used for many types of orthodontic problems and is an alternative for fixed braces. Invisalign moves not only the teeth, but the roots as well.

How long will the treatment take?

Treatment can be relatively short for cases where there is a relapse following conventional orthodontic treatment for example 3-6 months. Most treatment will take 6-18 months, which is slightly less than normal fixed braces.

How many appointments will I need?

This depends on the complexity of the treatment required. The beauty of Invisalign® is that once treatment commences you will receive a series of slightly different aligners, reducing the number of appointments needed.

What happens next if I want to know more?

Please make an appointment with Peter for a no-obligation consultation free of charge. He will be able to assess your requirements and provide you with more information.

Payment Options

A full estimate of treatment costs will be provided following analysis by the laboratory.

Treatment costs can be spread using Interest-free finance (subject to T & Cs), if you would like further information about treatment or finance please call the practice.

Treatment Guide Invisalign®

 **invisalign®**
The Clear Alternative to Braces

Invisalign®

Invisalign® has arrived at Hoburne Dental Practice! Get the confidence to smile once again with Invisalign®, over 4.5 million people worldwide already have.

What is Invisalign®?

Invisalign is the virtually invisible way to straighten your teeth and achieve the smile you've always dreamed of.

A treatment plan is devised using 3D computer-imaging technology. You will be shown a simulation depicting the planned tooth movements from the starting position through to the desired result. A series of clear aligners are custom-made for your teeth to move them little by little. Each aligner is worn for between one and two weeks before being replaced by the next in the series, gradually moving towards the planned final position.

Your Invisalign treatment time will be determined based on your specific needs.

What are the benefits of Invisalign?

Invisalign aligners are nearly invisible. People may not even notice that you're wearing them as they are virtually invisible, this makes Invisalign a seamless fit with your lifestyle and day-to-day interactions with others.

Invisalign aligners are removable giving you the flexibility to eat and drink what you want during treatment. This also allows you to brush and floss as you normally would for fresh breath and to maintain good oral hygiene.

Unlike traditional fixed braces, there are no metal brackets or wires. This means that in most cases less time is spent in your practice for adjustments.

Previous patients have highlighted the benefit of being able to view the final result and treatment plan before you begin treatment so you can see how your teeth are expected to look when your treatment is complete.

Is this a new way to straighten teeth?

Dentists and Orthodontists have successfully used removable appliances for years. But with the application of 3D computer technology the Invisalign System can be used to treat a wide range of patients who want straighter teeth. The unique ClinCheck® software allows patients to see their treatment plan from beginning to end even before the start of treatment.

The use of the advanced 3D computer-imaging technology allows the Invisalign system to be used on a wider range of patients who want straighter teeth.
